

A Story Map esri

Weather conditions

I will be talking about three national landmarks (Rocky mountains, Grand Canyon, Zion) and the weather.

Purpose

The purpose of this map is to convey when time to go to these three national landmarks. This would be the Rocky Mountains, the Grand Canyon, and Zion National park. I picked these areas because These three areas are three of the most visited national landmarks.

Analysis

What I did with my analysis is I used quantitative and comparison to analyze how temperature, rainfall, and snowfall are all related.

The Result

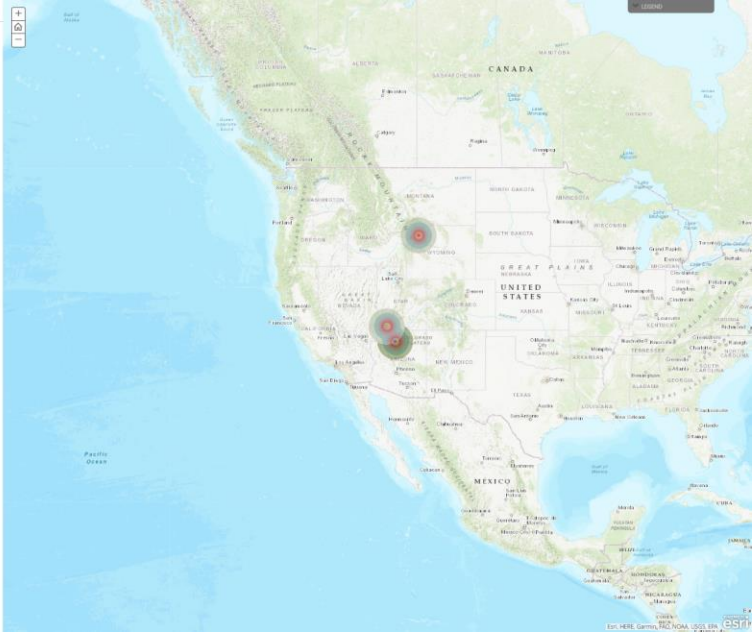

When you interpret the map, usually the darker colors mean more. It is only the opposite with temperature (more yellow, higher temperatures). You can prove the correlation in the map by looking at the temperature and snowfall. If there is an overall higher temperature in these places, they are more likely to have less snowfall.

What to Wear?

Because of all this data we can say it is best to go to these places in the summer. The most appropriate clothing to wear during this time would be a shorts, shorts, and hats, and/or short sleeve shirts.
